Results
While passing under one of these overhead restrictions, the vehicle, container, or load strikes the object. This can result in several different scenario’s. The vehicle becomes wedged, or otherwise incapacitated, the object is torn down, damaged or is rendered unsafe. This is not to mention injuries you may sustain, but also any pedestrians or other motor vehicles in the area at the time.

Prevention
All drivers have a duty to understand what the height of the vehicle their driving is. Which should include, the height to which your load extends.
