Hand Sanitizer Safety

Rising temperatures coupled with closed cabs or vehicles could result in fires

- Keep sanitizer out of direct sunlight
- Preferably remove on hot days
- Be mindful of potential ignition sources

Hand Sanitizer contains ethyl alcohol, which readily evaporates at room temperature into an ignitable vapor, and is considered a flammable liquid. Although the incidence of fires related to ABHS is very low, it is vital that ABHS is stored safely and that bulk dispensers are installed and maintained correctly.
